

**HANOPLAN**  
*Spirit of Building*

**First of all, for our office the most important aims include competitiveness, solidity, exactitude, preserving creativity and being in time.**

---

Secondly, we would like to retain the procurer's appreciation, gain the principal's acknowledgement with deliberate planning, basic discipline and professional calling. We always provide our tasks at a high level with fully comprehensive services for dead-line. Finally, we are fully aware that the planned processes can lead to achievements if we see them through the beginning to the execution and then we are able to ensure the suitable technologic quality.

## INTRODUCTION

---

HANO-PLAN Ltd. was established in 2008 with one founder. The company and its economic form were created by the growth of orders and demands.

Our company has grown from a micro-enterprise to a high-performance enterprise with permanent subcontractors and cooperating partners.

Our activities are focused on building services engineering, integrated fire protection, electrical and BMS design for industrial, technological, public buildings and large building complexes, as well as technical expertise for existing buildings/systems.

We primarily encourage our clients to use renewable energy sources and/or energy efficient systems, and we carry out payback calculations and system comparisons to help them decide which is the best solution for them.

We are now a market leader in Hungary in the development and application of innovative solutions for the professional industry, and as a result we are asked by our partners to contribute to projects that are unique not only in Hungary but also worldwide.

As a result of our technological developments in recent years and the BIM methodology and LIDAR technology introduced, we are able to offer our partners new services that have significantly increased our competitiveness.

Today, our office offers a comprehensive service to our partners, providing full support from the first steps to the handover of real estate developments.

Our aim is to contribute with our projects to an energy-conscious vision of the future, taking into account the new EU climate objectives, all in a way that enables the realisation of a new people-centred comfort environment.

## REVENUES & EMPLOYEE NUMBERS

Since the founding of the company we have experienced a continuously increasing growth both in revenues and number of colleagues which reflects the growing confidence of the clients in our work.

YEAR	NET ANNUAL REVENUE (MHUF)	NUMBER OF COLLEAGUES
2022	422	22
2021	250	21
2020	209	20
2019	383	18
2018	260	14
2017	188	14
